Contents for Volume 128

Number 1, 7 September 1987

OLSON, A. D., Picking Lowest-Cost Measurements for Identifying Unknowns 1

KAUFFMAN, S. and LEVIN, S., Towards a General Theory of Adaptive Walks on Rugged Landscapes 11

LEWIS, R. D. and SAUNDERS, D. S., A Damped Circadian Oscillator Model of an Insect Photoperiodic Clock I. Description of the Model Based on a Feedback Control System 47

SAUNDERS, D. S. and LEWIS, R. D., A Damped Circadian Oscillator Model of an Insect Photoperiodic Clock II. Simulations of the Shapes of the Photoperiodic Response Curves 61

SAUNDERS, D. S. and LEWIS, R. D., A Damped Circadian Oscillator Model of an Insect Photoperiodic Clock III. Circadian and "Hourglass" Responses 73

BLOMBERG, C., Free Energy and Time Economy for the Mutual Selection of Monomers in Biosynthesis, Primarily Protein Synthesis . . . 87

VERTREGT, N. and PENNING DE VRIES, F. W. T., A Rapid Method for Determining the Efficiency of Biosynthesis of Plant Biomass . . 109

ELLIOTT, R. J. and GOODFELLOW, J. M., Ammonium Ion Representation in Monte Carlo Simulations of Biomolecular Solutions 121

Number 2, 21 September 1987

FRANCIOLINI, F., Spontaneous Firing and Myelination of Very Small Axons 127

DA-FU, D. and PRIGOGINE, I., Morphological and Chiral Symmetry Breaking in Reaction-Diffusion Systems 135

WALDMAN, B., Mechanisms of Kin Recognition 159

OHSHIMA, H. and KONDO, T., Electrostatic Repulsion of Ion Penetrable Charged Membranes: Role of Donnan Potential 187

POMIANKOWSKI, A., The Costs of Choice in Sexual Selection . . . 195

OMHOLT, S. W., Thermoregulation in the Winter Cluster of the Honeybee, *Apis mellifera* 219

MICHELSON, S., MILLER, B. E., GLICKSMAN, A. S. and LEITH, J. T., Tumor Microecology and Competitive Interactions 233

MAYNARD SMITH, J., On the Equality of Origin and Fixation Times in Genetics 247

Number 3, 7 October 1987

MINI REVIEW

RICARD, J., Dynamics of Multi-Enzyme Reactions, Cell Growth and Perception of Ionic Signals from the External Milieu . . . 253

HSU, J.-P., Stochastic Modeling of Bacterial Adhesion in an Open Flow System. I. Single Mixed Tank 279

FERREIRA, R., A Two-substrate Michaelis–Menten Model for the Growth of Self-replicating Polymers 289

FELDMAN, M. W. and THOMAS, E. A. C., Behaviour-dependent Contexts for Repeated Plays of the Prisoner's Dilemma II: Dynamical Aspects of the Evolution of Cooperation 297

WOYCIECHOWSKI, M. and ŁOMNICKI, A., Multiple Mating of Queens and the Sterility of Workers Among Eusocial Hymenoptera 317

OMHOLT, S. W., Why Honeybees Rear Brood in Winter. A Theoretical Study of the Water Conditions in the Winter Cluster of the Honeybee, *Apis mellifera* 329

MURAKAMI, M., Critical Amino Acids of p21 Protein are Located Within β-Turns: Further Evaluation 339

BOGART, M. H., Sex Determination: A Hypothesis Based on Steroid Ratios 349

NAGORCKA, B. N., MANORANJAN, V. S. and MURRAY, J. D., Complex Spatial Patterns from Tissue Interactions—an Illustrative Model . . . 359

WAGG, J., A Method for Defining Steady-state Unidirectional Fluxes Through Branched Chemical, Osmotic and Chemiosmotic Reactions . . 375

GREEN, P. B. and BAXTER, D. R., Phyllotactic Patterns: Characterization by Geometrical Activity at the Formative Region 387

LETTER TO THE EDITOR

GÜNTHER, B. and MORGADO, E., Body Size and Metabolic Rate: the Role of Units 397

Number 4, 21 October 1987

ALEJANDRE-DURAN, E., DE ANDRES-CARA, D. F. and PORRAS, A., Simulation of the Effect of Population Size on the Evolution of the Recombination Fraction 399

GREGORIUS, H.-R. and HATTEMER, H. H., Characterization of Mating Systems 407

KIJIMA, S. and KIJIMA, H., Statistical Analysis of Channel Current from a Membrane Patch I. Some Stochastic Properties of Ion Channels or Molecular Systems in Equilibrium 423

KIJIMA, S. and KIJIMA, H., Statistical Analysis of Channel Current From a Membrane Patch II. A Stochastic Theory of a Multi-channel System in the Steady-state 435

ARQUÈS, D. G. and MICHEL, C. J., A Purine-Pyrimidine Motif Verifying an Identical Presence in Almost All Gene Taxonomic Groups . . 457

SZATHMÁRY, E. and DEMETER, L., Group Selection of Early Replicators and the Origin of Life 463

DERANLEAU, D. A., Kinetic Models of Cell Shape Changes and other Optically-detected Responses to Stimulation 487

RYTI, R. T., Allocation of Energy to Reproduction: Effects of Competition and Population Structure 499

HOPWOOD, P. R. and GRIFFITHS, D. A., Biochemical Investigation of Tissue Growth: Towards Definition of "Standard" Tissue Samples . . 513

LETTER TO THE EDITOR

CALDER, III, W. A., Metabolic Allometry: Basic Correlations are Independent of Units When Properly Converted 523

ANNOUNCEMENT 525

ERRATA 527

Fluxes, unidirectional, steady-state, through branched chemical, osmotic and chemiosmotic reactions, a method for defining, 375
FRANCIOLINI, F., Spontaneous firing and myelination of very small axons, 127

Gene taxonomic groups, a purine-pyrimidine motif verifying an identical presence in, 457
Genetics, on the equality of origin and fixation times in, 247
Geometrical activity at the formative region, characterization of phyllotactic patterns by, 387
GLICKSMAN, A. S. (see MICHELSON, S.), 233
GOODFELLOW, J. M. (see ELLIOTT, R. J.), 121
GREEN, P. B. and BAXTER, D. R., Phyllotactic patterns: characterization by geometrical activity at the formative region, 387
GRIFFITHS, D. A. (see HOPWOOD, P. R.), 513
Group selection of early replicators and the origin of life, 463
Growth of self-replicating polymers, a two-substrate Michaelis-Menten model for, 289
Growth, cell, and perception of ionic signals from the external milieu; dynamics of multi-enzyme reactions, 253
Growth of tissue, biochemical investigation of; towards a definition of "standard" tissue samples, 513
GÜNTHER, B. and MORGADO, E., Body size and metabolic rate: the role of units (letter), 397

HATTEMER, H. H. (see GREGORIUS, H.-R.), 407
Honeybee, *Apis mellifera*, a theoretical study of the water conditions in the winter cluster of; why honeybees rear brood in winter, 329
Honeybee, *Apis mellifera*, thermoregulation in the winter cluster of, 219
HOPWOOD, P. R. and GRIFFITHS, D. A., Biochemical investigation of tissue growth: towards definition of "standard" tissue samples, 513
HSU, J.-P., Stochastic modeling of bacterial adhesion in an open flow system. I. Single mixed tank, 279
Hymenoptera, eusocial, multiple mating of queens and the sterility of workers among, 317

Insect photoperiodic clock, a damped circadian oscillator model; description of the model based on a feedback control system, 47
Insect photoperiodic clock, a damped circadian oscillator model; simulations of the shapes of the photoperiodic response curves, 61
Insect photoperiodic clock, a damped circadian oscillator model; circadian and "hourglass" response, 73
Ion channels or molecular systems in equilibrium, some stochastic properties of, 423
Ionic signals from the external milieu, dynamics of multi-enzyme reactions, cell growth and perception of, 253

KAUFFMAN, S. and LEVIN, S., Towards a general theory of adaptive walks on rugged landscapes, 11
KAJIMA, H. (see KAJIMA, S.), 423, 435
KIJIMA, S. and KIJIMA, H., Statistical analysis of channel current from a membrane patch I. Some stochastic properties of ion channels or molecular systems in equilibrium, 423
KIJIMA, S. and KIJIMA, H., Statistical analysis of channel current from a membrane patch II. A stochatic theory of a multi-channel system in the steady-state, 435
Kin recognition, mechanisms of, 159
Kinetic models of cell shape changes and other optically-detected responses to stimulation, 487
KONDO, T. (see OHSHIMA, H.), 187

Landscapes, rugged, towards a general theory of adaptive walks on, 11
LEITH, J. T. (see MICHELSON, S.), 233
LEVIN, S. (see KAUFFMAN, S.), 11
LEWIS, R. D. and SAUNDERS, D. S., A damped circadian oscillator model of an insect photoperiodic clock I. Description of the model based on a feedback control system, 47
LEWIS, R. D. (see SAUNDERS, D. S.), 61, 73
Life, origin of, and group selection of early replicators, 463
LOMNICKI, A. (see WOYCIECHOWSKI, M.), 317

MANORANJAN, V. S. (see NAGORCKA, B. N.), 359
Mating, multiple, of queens and the sterility of workers among eusocial hymenoptera, 317
Mating systems, characterization of, 407
MAYNARD SMITH, J., On the equality of origin and fixation times in genetics, 247
Membrane patch, statistical analysis of channel current from; some stochastic properties of ion channels or molecular systems in equilibrium, 423
Membrane patch, statistical analysis of channel current from; a stochastic theory of a multi-channel system in the steady-state, 435
Membranes, charged, ion penetrable, electrostatic repulsion of; role of Donnan potential, 187
Metabolic allometry: basic correlations are independent of units when properly converted (letter), 523
Metabolic rate and body size; the role of units (letter), 397
Michaelis–Menten two-substrate model for the growth of self-replicating polymers, 289
MICHEL, C. J. (see ARQUÈS, D. G.), 457
MICHELSON, S., MILLER, B. E., GLICKSMAN, A. S. and LEITH, J. T., Tumor microecology and competitive interactions, 233
Microecology, tumor, and competitive interactions, 233
MILLER, B. E. (see MICHELSON, S.), 233
Monomers in biosynthesis, free energy and time economy for the mutual selection of, 87
Monte Carlo simulations of biomolecular solutions, ammonium ion representation in, 121
MORGADO, E. (see GÜNTHER, B.), 397
Morphological and chiral symmetry breaking in reaction-diffusion systems, 135
Multi-enzyme reactions, cell growth and perception of ionic signals from the external milieu, dynamics of, 253
MURAKAMI, M., Critical amino acids of p21 protein are located within β-turns: further evaluation, 339
MURRAY, J. D. (see NAGORCKA, B. N.) 359
Myelination of very small axons, spontaneous firing and, 127

NAGORCKA, B. N., MANORANJAN, V. S. and MURRAY, J. D., Complex spatial patterns from tissue interactions—an illustrative model, 359

OHSHIMA, H. and KONDO, T., Electrostatic repulsion of ion penetrable charged membranes: role of Donnan potential, 187
OLSON, A. D., Picking lowest-cost measurements for identifying unknowns, 1
OMHOLT, S. W., Thermoregulation in the winter cluster of the honeybee *Apis mellifera*, 219
OMHOLT, S. W., Why honeybees rear brood in winter. A theoretical study of the water conditions in the winter cluster of the honeybee, *Apis mellifera*, 329
Optically-detected response to stimulation, kinetic models of cell shape changes and, 487
Origin and fixation times in genetics, on the equality of, 247
Osmotic, chemical and chemiosmotic reactions, branched, a method for defining steady-state unidirectional fluxes through, 375

p21 protein, critical amino acids are located within β-turns; further evaluation, 339
Patterns, phyllotactic; characterization by geometrical activity at the formative region, 387

Patterns, spatial, complex, from tissue interactions; an illustrative model, 359
PENNING DE VRIES, F. W. T. (see VERTREGT, N.), 109
Photoperiodic clock, insect, a damped circadian oscilator model; description of the model based on a feedback control system, 47
Photoperiodic clock, insect, a damped circadian oscillator model; simulations of the shapes of the photoperiodic response curves, 61
Photoperiodic clock, insect, a damped circadian oscillator model; circadian and "hourglass" responses, 73
Phyllotactic patterns: characterization by geometrical activity at the formative region, 387
Plant biomass, a rapid method for determining the efficiency of biosynthesis of, 109
Polymers, self-replicating, a two-substrate Michaelis-Menten model for the growth of, 289
POMIANKOWSKI, A., The costs of choice in sexual selection, 195
Population size, simulation of the effect on the evolution of the recombination fraction, 399
Population structure, effect on allocation of energy to reproduction, 499
PORRAS, A. (see ALEJANDRE-DURAN, E.), 399
PRIGOGINE, I. (see DA-FU, D.), 135
Prisoner's dilemma, behaviour-dependent contexts for repeated plays of; dynamical aspects of the evolution of cooperation, 297
Protein p21, critical amino acids are located within β-turns; further evaluation, 339
Protein synthesis, free energy and time economy for the mutual selection of monomers in, 87
Purine-pyrimidine motif verifying an identical presence in almost all gene taxonomic groups, 457
Pyrimidine-purine motif verifying an identical presence in almost all gene taxonomic groups, 457

Queens, multiple mating of, and the sterility of workers among eusocial hymenoptera, 317

Reaction-diffusion systems, morphological and chiral symmetry breaking in, 135
Recombination fraction, simulation of the effect of population size on the evolution of, 399
Recognition, kin, mechanisms of, 159
Replicators, early, group selection of, and the origin of life, 463
Reproduction, allocation of energy to; effects of competition and population structure, 499
RICARD, J., Dynamics of multi-enzyme reactions, cell growth and perception of ionic signals from the external milieu, 253
RYTI, R. T., Allocation of energy to reproduction: effects of competition and population structure, 499

SAUNDERS, D. S. and LEWIS, R. D., A damped circadian oscillator model of an insect photoperiodic clock II. Simulations of the shapes of the photoperiodic response curves, 61
SAUNDERS, D. S. and LEWIS, R. D., A damped circadian oscillator model of an insect photoperiodic clock III. Circadian and "hourglass" responses, 73
SAUNDERS, D. S. (see LEWIS, R. D.), 47
Selection, group, of early replicators and the origin of life, 463
Selection, mutual, of monomers in biosynthesis, free energy and time economy for, 87
Selection, sexual, the costs of choice in, 195
Self-replicating polymers, a two-substrate Michaelis-Menten model for the growth of, 289
Sex determination: a hypothesis based on steroid ratios, 349
Sexual selection, the costs of choice in, 195
Shape changes of cells, kinetic models of, 487
Size, body, and metabolic rate; the role of units (letter), 397
Size, population, simulation of effect on the evolution of the recombination fraction, 399
Spatial patterns, complex, from tissue interactions; an illustrative model, 359
"Standard" tissue samples, towards definition of, 513
Sterility of workers, multiple mating of queens and, among eusocial hymeoptera, 317

Steroid ratios, a hypothesis of sex determination based on, 349
stimulation, kinetic models of cell shape changes and other optically-detected responses to, 487
Stochastic modeling of bacterial adhesion in an open flow system. Single mixed tank, 279
Symmetry breaking, morphological and chiral, in reaction-diffusion systems, 135
SZATHMÁRY, E. and DEMETER, L., Group selection of early replicators and the origin of life, 463

Taxonomic, gene, groups, a purine-pyrimidine motif verifying an identical presence in, 457
Thermoregulation in the winter cluster of the honeybee, *Apis mellifera*, 219
THOMAS, E. A. C. (see FELDMAN, M. W.), 297
Time economy, free energy and, for the mutual selection of monomers in biosynthesis, primarily protein synthesis, 87
Tissue growth, biochemical investigation of; towards a definition of "standard" tissue samples, 513
Tissue interactions, complex spatial patterns from; an illustrative model, 359
Tumor microecology and competitive interactions, 233

Units, basic correlations are independent of, when properly converted; metabolic allometry (letter), 523
Units, role in body size and metabolic rate (letter), 397
Unknowns, picking lowest-cost measurements for identifying, 1

VERTREGT, N. and PENNING DE VRIES, F. W. T., A rapid method for determining the efficiency of biosynthesis of plant biomass, 109

WAGG, J., A method for defining steady-state unidirectional fluxes through branched chemical, osmotic and chemiosmotic reactions, 375
WALDMAN, B., Mechanisms of kin recognition, 159
Water conditions in the winter cluster of the honeybee, *Apis mellifera*, a theoretical study; why honeybees rear brood in winter, 329
Winter cluster of the honeybee, *Apis mellifera*, a theoretical study of the water conditions in; why honeybees rear brood in winter, 329
Winter cluster of the honeybee, *Apis mellifera*, thermoregulation in, 219
Workers, multiple mating of queens and the sterility of, among eusocial hymenoptera, 317
WOYCIECHOWSKI, M. and LOMNICKI, A., Multiple mating of queens and the sterility of workers among eusocial hymenoptera, 317
